DETAILED ACTION

Terminal Disclaimer

1. The terminal disclaimer filed on 2/14/08 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US patent 7,145,530 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Allowable Subject Matter

2. Claims 1-12 are allowed.

3. The following is an examiner's statement of reasons for allowance: The terminal disclaimer overcomes the prior arts fails to teach an electro-optical device, comprising: an electro-optical element with a current-based data signal defining a tonal gradation level of pixels, during a first mode in which the data signal is supplied to the data line not through the first switching element, the first switching element is set to be in a non-conductive state while the second switching element is set to be in a conductive state, and during a second mode in which a signal different from the data signal is supplied to the data line through the first switching element, the first switching element is set to be in a conductive state while the second switching element is set to be in a non-conductive state as claimed in Claim 1.

4. The prior arts fails to teach an electro-optical device, comprising: an electro-optical element with a current-based data signal defining a tonal gradation level of pixels, supplied to data lines and with a luminance set in response to a driving current; during a first mode in which the data signal is supplied to the data line not through the switching element, the switching element is set to be in a non-conductive state while the signal transfer line is supplied with a predetermined voltage corresponding to a voltage that occurs in the data line when the data line is supplied with the data signal defining the lowest tonal gradation level, and during a second mode in which a signal different from the data signal is supplied to the data line through the switching element, the switching element is set to be in a conductive state while the supplying of the predetermined voltage to the signal transfer line is stopped as claimed in Claim 3.

5. The prior arts fails to teach an method to drive an electro-optical device having an electro-optical element with a current-based data signal defining a tonal gradation level of pixels, and supplied to data lines, and with a luminance set in response to a driving current flowing from a power source voltage to a voltage lower in level than the power source voltage, the method comprising: setting, to be in a non-conductive state, a first switching element that controls electrical conduction between the data line arranged for respective pixels and a signal transfer line and setting, to a conductive state, a second switching element that controls electrical conduction

between the power source voltage and the signal transfer line, during a first mode in which the data signal is supplied to the data line not through the first switching element; and setting the first switching element to be in a conductive state and setting the second switching element to be in a non-conductive state during a second mode in which a signal different from the data signal is supplied to the data line through the first switching element as claimed in Claim 8.

6. The prior arts fails to teach an method to drive an electro-optical device having an electro-optical element with a current-based data signal defining a tonal gradation level of pixels, and supplied to data lines and with a luminance set in response to a driving current, the method comprising: setting, to be in a non-conductive state, a switching element that controls electrical conduction between the data line and a signal transfer line, and supplying the signal transfer line with a predetermined voltage corresponding to a voltage that occurs in the data line when the data line is supplied with the data signal defining the lowest tonal gradation level, during a first mode in which the data signal is supplied to the data line arranged for respective pixels, not through the switching element; and setting the switching element to be a conductive state and stopping the supplying of the predetermined voltage to the signal transfer line, during a second mode in which a signal different from the data signal is supplied to the data line through the switching element as claimed in Claim 10.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
